

Newsletter 08/2017

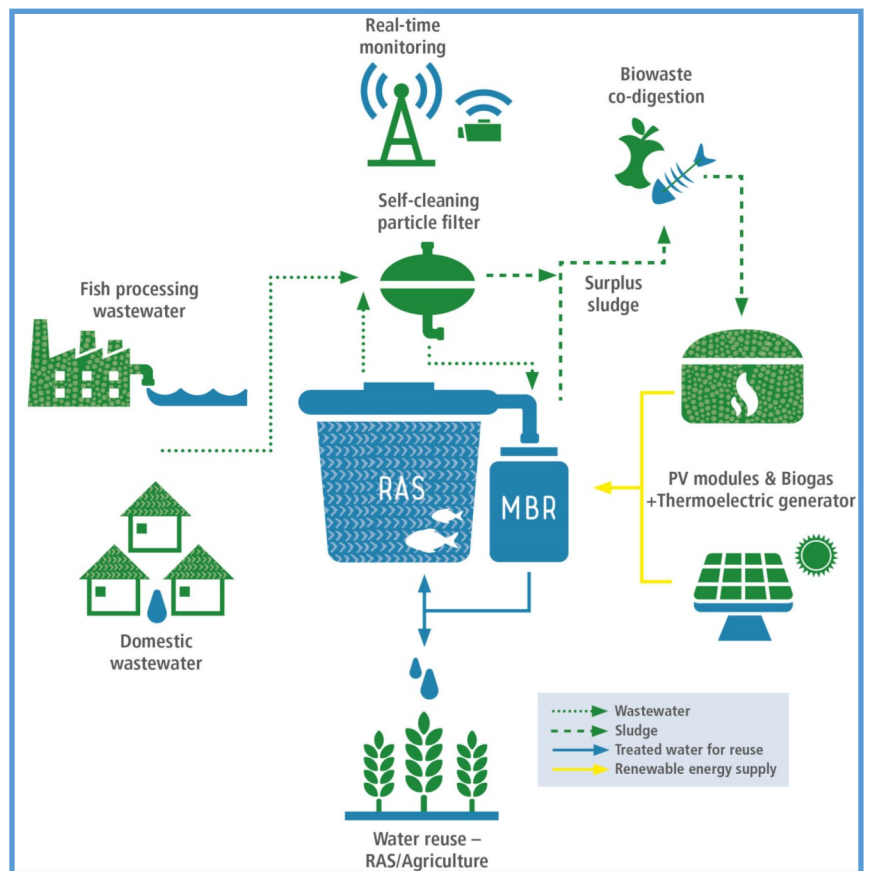

Welcome to our first newsletter

It has been a busy first year for VicInAqua with the start of several activities: launch of the adaptation process of challenging high technologies such as Recirculation Aquaculture Systems (RAS) and Membrane Bioreactors (MBR) to difficult environments (e.g. remote and dry locations), search for potential sites for our piloted unit, study of best practices in sustainable aquaculture, networking and dissemination with local stakeholders, promotion in various scientific conferences, connection to our sister projects funded under the same topic... And a lot more to come!

And thus we welcome you to get some insights with this newsletter — but don't hesitate to contact us directly if you would like to know more.

We look forward to interesting discussions, experience sharing, recommendations for relevant events and contact to further organisations or networks involved in our core areas.

[how it started >>](#)

The *VicInAqua concept* is a sustainable circular ecosystem involving advanced (**waste**) **water treatment** with novel self-cleaning and anti-fouling membranes, innovative **aquaculture** with RAS, integrated **water reuse**, low-cost but robust real-time **monitoring**, energy sufficiency based on **renewable sources**, **environmental impact assessment**, **awareness rising**, **capacity building**, **knowledge transfer** and **gender equality**.
